

930/037 Typical Diagram

BELL-BUZZER SYSTEM

The Apartment Station consists of a bell or buzzer and a pushbutton. A visitor rings the bell/buzzer and the resident opens the door by depressing the pushbutton. **No verification of the identity of visitor is possible.**

*****Building Wiring, (if electrically sound) does not need to be changed*****

ELVOX 930/037 SYSTEM

The Elvox Apartment Station is an intercom handset with a pushbutton. When a visitor rings the entry panel, a pleasant tone sounds at the handset. **The resident can speak to the visitor to determine identity prior to activation the door release.**

Use Elvox Entry Panels Series 2990-3200-Multi-system or Patavium

Use Elvox Handsets 875/037, 875/837, 900/137, 900/837, or 7101

930/037

The Elvox 930/037 is a speaker/mic and system controller for apartment intercom systems. In most cases, it can be used to create a communication and access system on existing wires.
