

NC-505 PROGRAMMER

APPLICATION

The NC515 (NC-515) Programmer is designed to allow installers to both install and reprogram the NC505 Additional Receiver and its associated transmitters for the Tek-CARE®500 Wireless Emergency Call System. The NC515 Programmer obtains its power from the NC505 Additional Receiver, requiring no batteries or additional power supplies.

The NC515 connects to the NC505 via a built-in cable that stores inside the NC515 when not in use. The NC515 Programmer is used to program transmission devices for use with the NC505 Additional Receiver.

FEATURES

- Self-contained—no power supply needed
- LCD display for convenient use
- Wiring stores inside unit when unused
- Sealed keypad for durability
- Made in the U.S.A.

SPECIFICATIONS

Dimensions: Height: 7" (178 mm)
Width: 4" (101 mm)
Depth: 1.5" (38 mm)

Construction: Black plastic housing

Connections: 6' (1.8 m) built-in cable

Power: Supplied by PK505

REQUIRED COMPONENTS

NC505 Additional Receiver

PK505 Power Supply

NC-515
Programmer

ARCHITECTS' AND ENGINEERS' SPECIFICATIONS

Programmer shall be TekTone® model NC515 (NC-515), or approved equal as supplied by LEE DAN®.

The NC515 Programmer shall set up and program the NC505 Additional Receiver for the Tek-CARE®500 Wireless Emergency Call System. It shall connect to the NC505 via a self-contained cable and shall require no external power supply. It shall provide both setup programming and non-destructive review of existing programming.

The NC515 Programmer shall have a sealed keypad for resistance to dirt and moisture such as might be encountered through normal indoor handling. The NC515 shall be used to program only the NC505 and associated transmission devices.
